

How does eating locally help ocean animals?

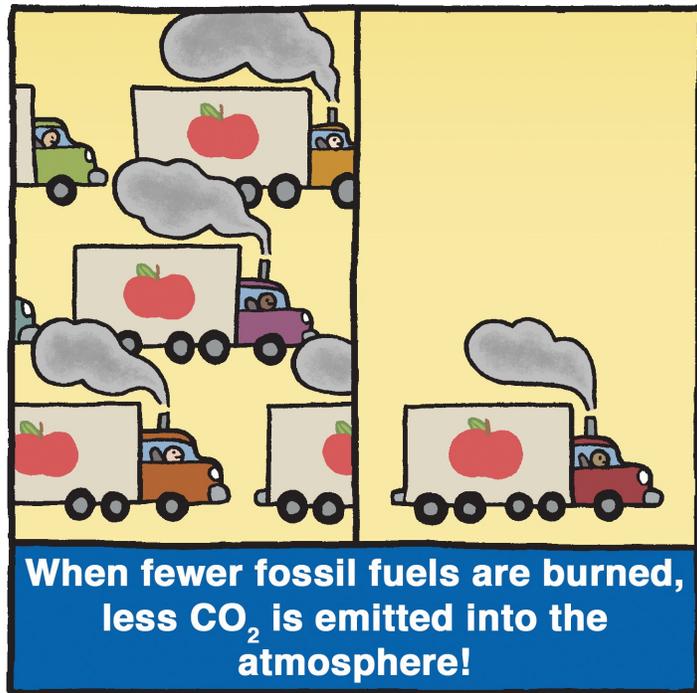

When you buy and eat from local farms and stores, your food doesn't have to travel as far.

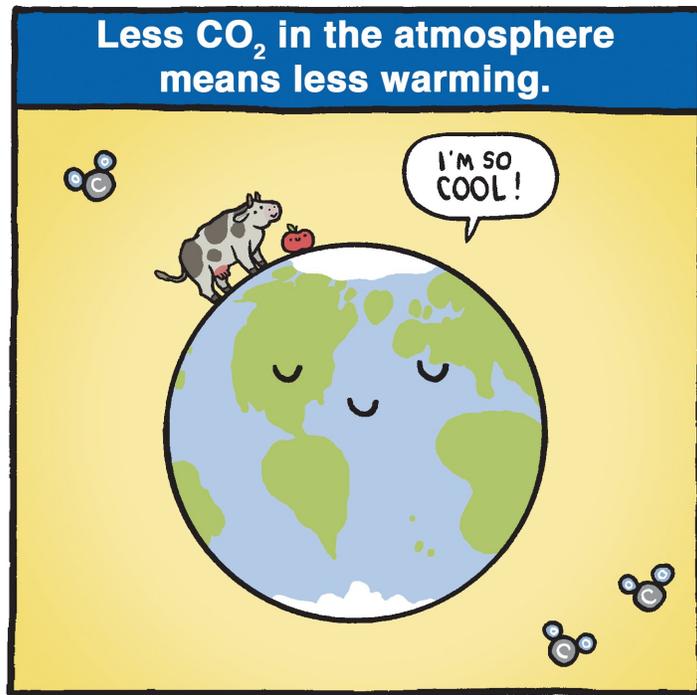

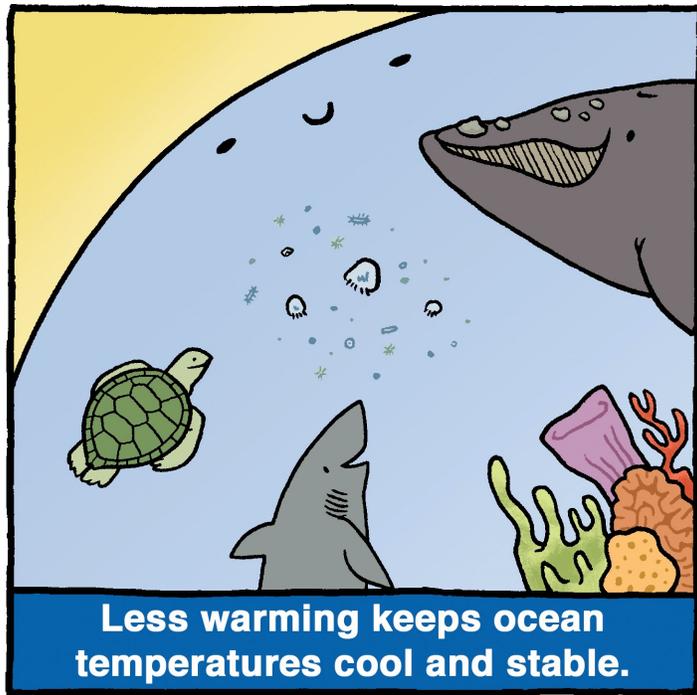

When your food is grown close to where you live, fewer fossil fuels are burned to get it to your plate.

**When fewer fossil fuels are burned,
less CO₂ is emitted into the
atmosphere!**

**Less CO₂ in the atmosphere
means less warming.**

Less warming keeps ocean temperatures cool and stable.
